

Announcement

Dear PRCY Community

With great pleasure we would like to inform you we release today the PRCY Coin QT Wallet. The PC wallet is available for Linux, Windows and Mac. If you need more help, please do not hesitate to join our Telegram PRCY Coin Support Channel: click here <https://t.me/prcySupport>.

What Is PRCY Coin?

PRCY is a revolutionary cryptocurrency blockchain-based project focused on security, scalability, and true 100% anonymity.

In one way or another it is still possible to trace certain transactional metadata or the sender and receiver. PRCY uses the established privacy protocols from PIVX and Monero and embedding them into a solution to offer to you a 100% truly-private cryptocurrency.

All PRCY transactions are private, this is a mandatory setting.

PRCY is Secure, 100% Private and contains multiple passive income features.

PRCY did not compromise any security and privacy aspects, the wallet is secure and protected and contains an advanced PRCY reward system.

PRCY features are one of the coolest passive income reward systems designed to incentivize the network participants.

1. Proof of Stake rewards, you need 2,500 PRCY as collateral.
2. Run your own Masternode to strengthen the network and therefore get more rewards for validating block transaction, you need 5,000 PRCY as collateral.
3. Another way to earn passive income with PRCY is by becoming a PoA miner.

You can download the wallet from the PRCY website, click here www.prcycoin.com. Keep all your private keys safe, make regularly a back up.
