

How to run the PRCY wallet in the daemon.

Open a command prompt window (CMD) by clicking the Windows logo in the bottom-left corner of the screen, typing "command" & hitting enter.

Repeat this and open a 2nd command prompt window.

In the first command prompt window, navigate to the folder where you installed PRCY (most likely this is "C:\Program Files\PRCYcoin". If you used a different directory remember to substitute the correct location). Copy/paste/type:

```
cd C:\Program Files\PRCYcoin
```

& then hit enter.

Next, start the daemon by copy/paste/typing:

```
prcycoind.exe -daemon -datadir=C:\Users\username\AppData\Roaming\PRCYcoin
```

Note that you will need to substitute "C:\Users\username\AppData\Roaming\PRCYcoin" with the location of your data files. You can find these quickly by opening a folder and in the address bar and typing "%appdata%". You should see your PRCYcoin folder there).

Wait 1-2 minutes.

Next, in the 2nd command prompt window navigate to the folder where you installed PRCY - copy/paste/type:

```
cd C:\Program Files\PRCYcoin
```

Then unlock your wallet by typing:

```
prcycoin-cli -datadir=C:\Users\username\AppData\Roaming\PRCYcoin unlockwallet  
"yourwalletpassword" 0
```

It may take a few seconds to several minutes for the command prompt to return, depending on the last time you synced your wallet, so just wait until the prompt returns. Then:

View your balance by typing:

```
prcycoin-cli -datadir=C:\Users\username\AppData\Roaming\PRCYcoin getbalances
```

To stop the wallet before closing down type:

```
prcycoin-cli.exe -datadir=C:\Users\username\AppData\Roaming\PRCYcoin stop
```

Type "help" & hit enter for a list of other commands you can use.
